

## Shipping, Unpacking & Maintaining PVC Projection Screens

- Screens are shipped folded in boxes via UPS, FedEx or common carrier (depending on size). Certain screens can be shipped rolled on a core if specified by the customer.
- Screens should be shipped and stored at temperatures between 40°F and 85°F. If screens are very cold they must be allowed to warm slowly to room temperature before unpacking or cold cracking may occur.
- Screens should never be stored folded.
- Screens can be washed using a soft cloth and mild dish soap. Do not use abrasives or harsh cleaners as they will damage the screen surface.
