

PROJECTION FABRIC SPECIFICATIONS

FABRIC: SHARKSTOOTH SCRIM
SKU: SHRK0031

DESCRIPTION: The unique weave and construction of Sharktooth Scrim make it exceptionally versatile as a projection surface. Front light or projected imagery allows the fabric to appear solid until ambient light levels are added upstage, at which point the material becomes translucent, revealing the upstage scene. The open weave of the lace construction allows for excellent imaging when rear projected as well, though caution should be taken to avoid light passing through to shine in the audience's eyes.

Colors:	White	Content:	100% Cotton
Width:	39'-0" (13m)	Construction:	Lace Weave
Roll Length:	Appr 65 yrd	Thickness:	
Weight:	91 GSM	Stretch:	
Finish:	Matte Lace Construction	FR:	NFPA 701, CA Title 19

Front Projection		Rear Projection	
Gain @ 90°:	0.52	Gain @ 90°:	1.26
Viewing Angle:	>175°	Viewing Angle:	>175°

Wrinkles easily removed with iron or hot water

Significant light pass through, project at steep angle to avoid shining into audience's eyes
